Navigating and managing images

After taking a photo

Viewing the last photo (or video) taken

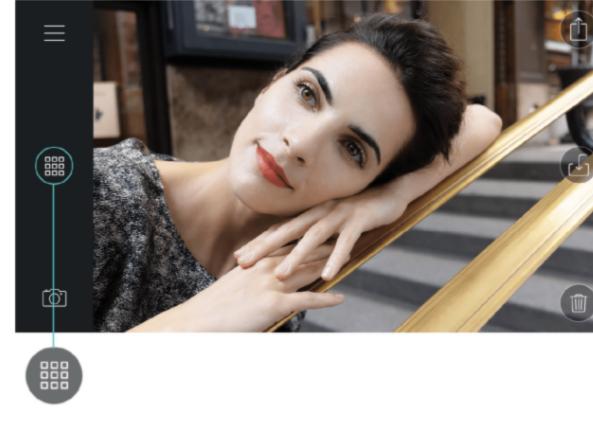

From the capture screen, press the Gallery button at the top left of the screen to open a preview of the last photo (or video) taken.

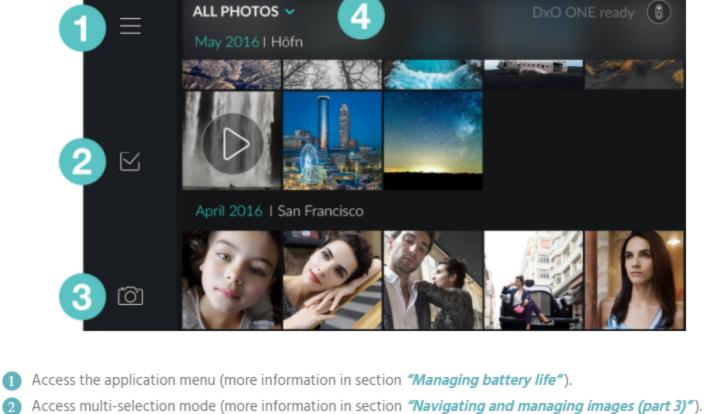

Displaying the gallery in Grid mode After accessing the gallery from the capture screen, press the Grid mode display button in the center of the toolbar

to access Grid view.

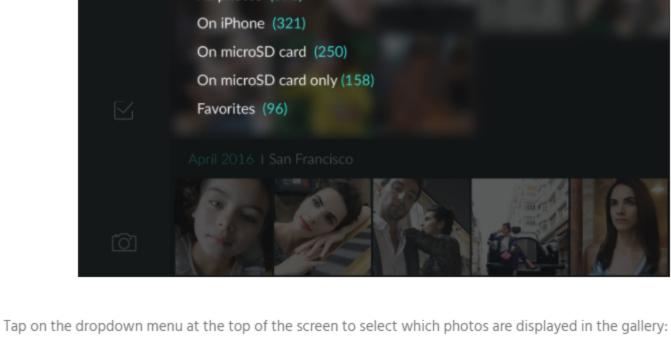

- Go back to the capture screen. 4 Filtering storage (more information in section below).
- In Grid view, the photos are grouped by the month in which they were taken in descending order (most recent at

Filtering storage spaces Your photos may be in your DxO ONE and/or in your iPhone. By default, in Grid view, you see the photos in either

of the two devices. The filtering menu then lets you view the specific contents of each device.

the bottom).

ALL PHOTOS ^ All photos (571)

« Favorites » correspond to the photos or videos you have marked as favorites by using the heart symbol.

Note that only photos or videos present in the iPhone can be marked as favorites.

« All photos » displays all the photos and videos on the microSD card and in the DxO ONE album on your

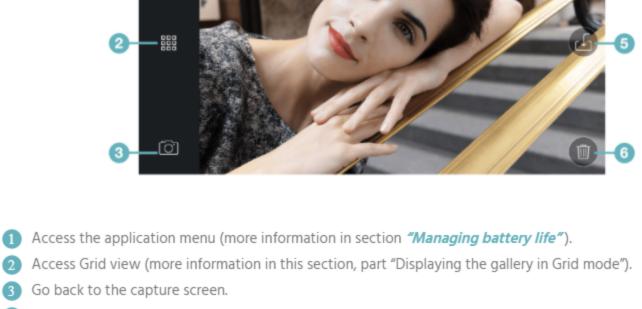

- « On iPhone » displays all DxO ONE photo and video files stored on your iPhone.
- « On microSD card » displays all photo and video files stored on the SD card in the camera. « On microSD card only » displays all photo and video files stored only on the SD card and not present on the
- iPhone. This can be handy for checking and transferring photos taken in stand-alone mode.
- To find out more about transferring photos from your DxO ONE to your iPhone, refer to section <u>"Navigating</u>"

Viewing a photo

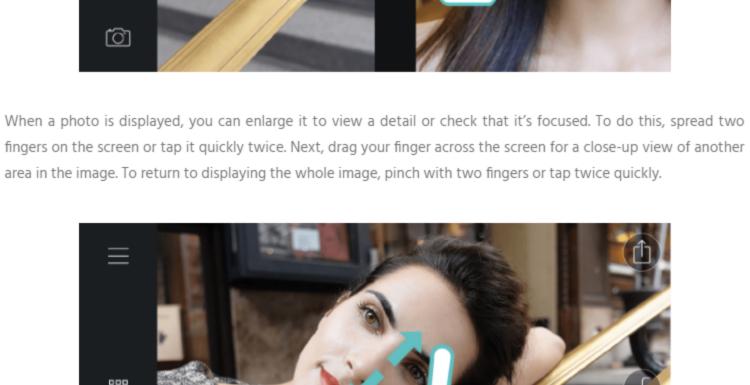

When you display a photo (either by accessing the Gallery from the capture screen, or by pressing this photo in Grid view), you have access to the following controls:

and managing images (part 2)".

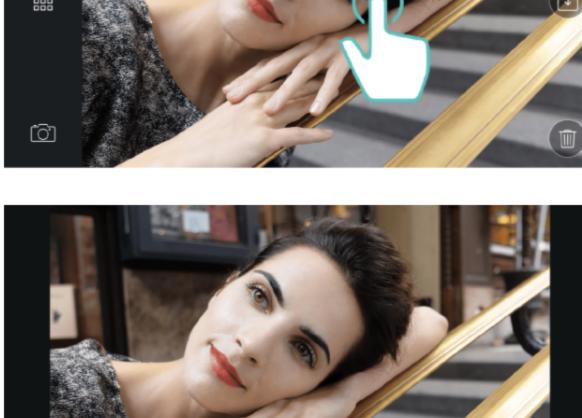

iPhone.

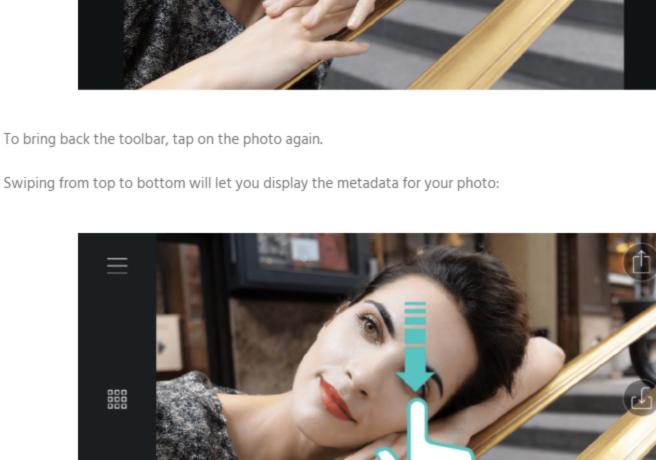

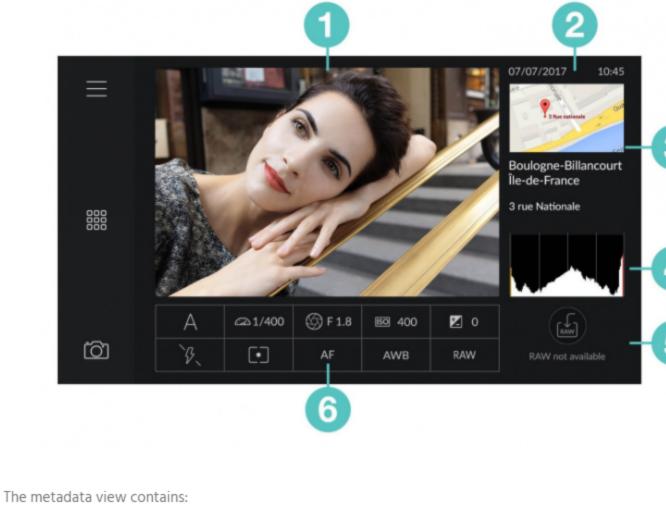

- Transfer video to iPhone/add to favorites (more information in sections "Navigating and managing images") (part 2)" and "Navigating and managing images (part 3)").
- 6 Delete photo (more information in section "Navigating and managing images (part 3)"). Swipe left to right (or right to left) to scroll through and view the photos.

To hide the toolbar and view your photo full screen, tap on the photo.

GPS information about the location, including a geographical map and the location of the photo.

6 A table summarizing the following information: 1st line: Exposure mode, shutter speed, aperture, sensitivity, and exposure compensation.

Date and time taken.

- according to their brightness, with dark pixels shown on the left of the histogram and light pixels on the right.
- If the image is correctly exposed, there will be no empty space on either the left or right of the histogram.

If the image is too dark, the histogram appears shifted to the left (= lack of lighter pixels). If the image is too light, the histogram appears shifted to the right (= lack of darker pixels).

b 2nd line: Flash status, metering mode, AF mode, white balance, and file type.

You can correct the exposure of your photo with the help of retouching applications, on your iPhone or on a computer. If you find you can't fully correct an over-exposed or under-exposed shot, you can use the RAW

For more information about RAW files and processing them, refer to section "File format and managing" RAW files".
