Slow motion video mode

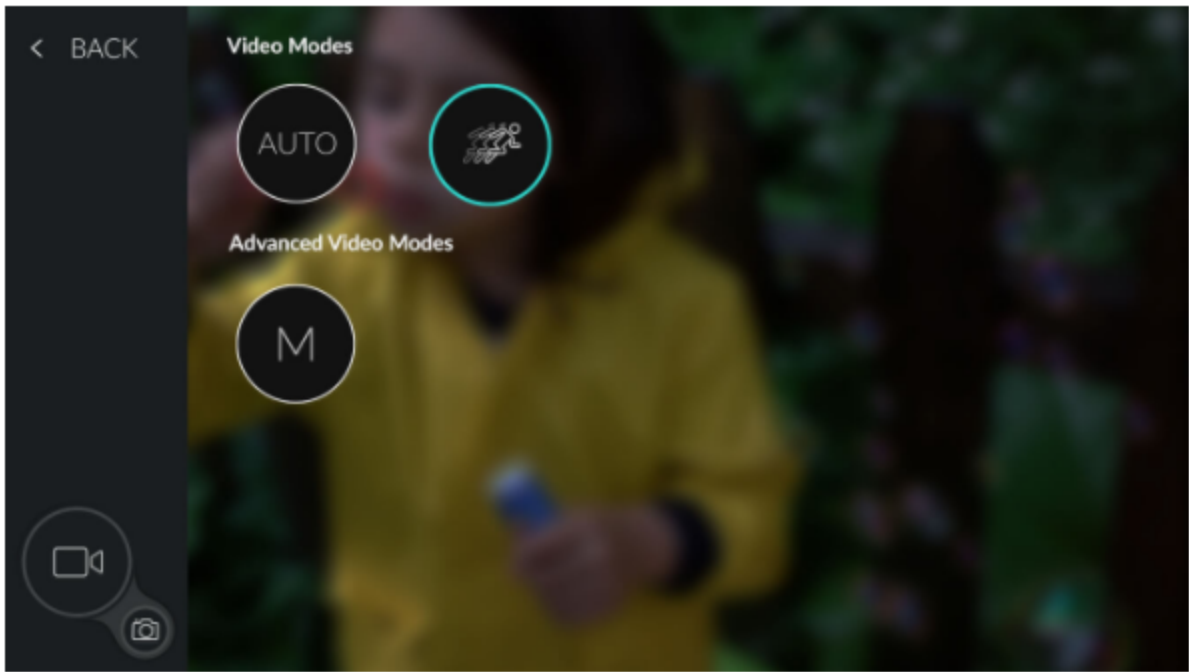

Recording videos

Slow motion is an effect that involves filming at a higher frame rate to slow down motion during playback. This lets you obtain a striking visual effect, especially for breaking down fast movement or giving your video a creative effect.

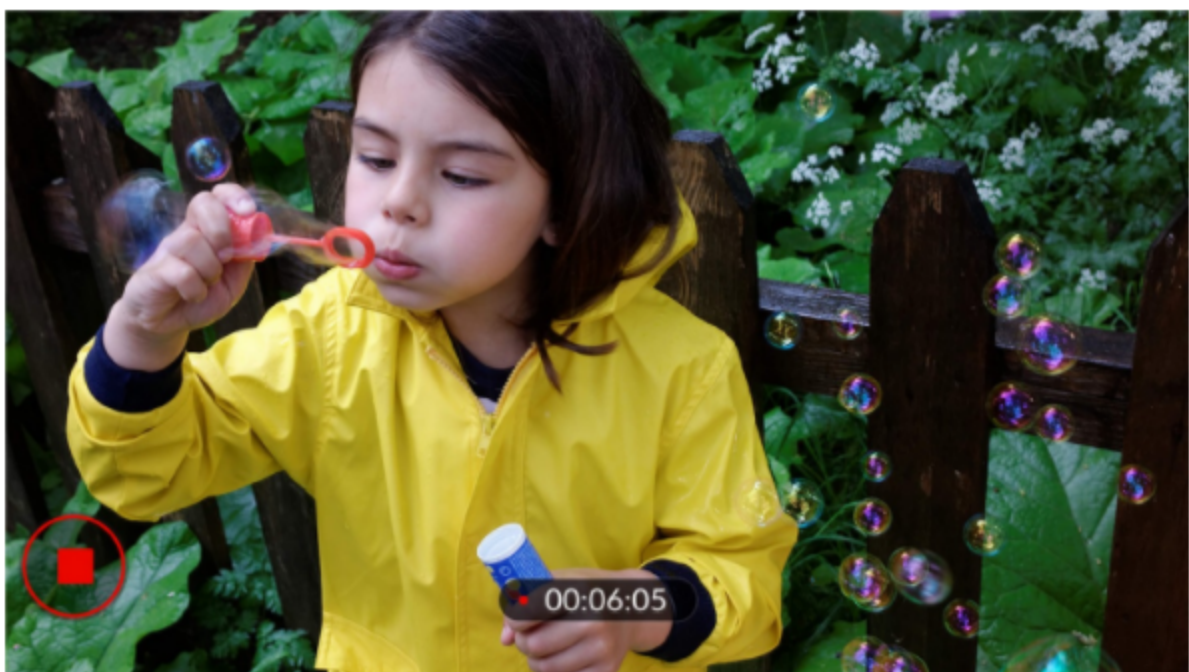

1 From the Auto Video mode, press  at the bottom right of the iPhone screen to open the video menu.

2 Select Slow motion mode by pressing .

3 The application shutter button will turn red when the camera is recording, and the application will display the elapsed time. The DxO ONE OLED screen will also display the Slow motion icon.

To play a Slow motion video in the application, see section *["Navigating and managing images \(part 2\)"](#)*.
